

Twinning Tunisia Project**Development of the Statistical Information System on Enterprises in collaboration with the Tunisian Statistical Institute (INS)****Project Value: € 1,050,000****Duration: 2007-2009**

The objective of the Twinning Tunisia project is the development of a **national Statistical Information System on data on enterprises**, in collaboration with the Tunisian Statistical Institute.

More in detail the project aims at: developing the overall architecture of an Observatory on enterprises and defining a global strategy for its development, strengthening the capacity of the Tunisian Statistical Institute both in coordinating the system and guaranteeing the enforcement of common regulation and standards, for collection, treatment, analysis and dissemination of statistics on enterprises.

CSI-Piemonte actively contributed to the preparation of the candidacy, thanks to its competences and experiences gained with its II'AAEP project (Production and Economic Activities Registry), candidating in the project team five resources with **diversified competences**: from architectures to logistics, from statistics to management, decisional and training competences.

These experts, during their **consulting missions in Tunisia**, will provide their qualified contribution to help the Tunisian Statistical Institute in defining and developing the National Statistical System on data on enterprises.
